DETAILED ACTION

Claim Objections

1. Claim 3 is objected to because of the following informalities: the claim ends with two periods ("..").

Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 5 recites the limitation "the cholesteric reflection band" in lines 1-2. There is insufficient antecedent basis for this limitation in the claim. This rejection can be overcome by changing the dependency of claim 5 from claim "3" to claim --4--.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sal in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 09/835,898

Art Unit: 1756

Claims 1-4 and 9-11 are rejected under 35 U.S.C. 102(b) as being anticipated by any one of JP 63-107585 (JP '585), JP 2-136292 (JP '292) or JP 8-304626 (JP '626).

JP '585 discloses a thermal transfer medium comprising a transfer layer which changes its color due to temperature change formed on a base film directly or through a release layer, wherein the transfer layer is formed form a coating composition containing microencapsulated cholesteric liquid crystal material. The thermal transfer medium is capable of recording transfer images, such as characters, illustrations and maps. See the abstracts and Figures 1-2.

JP '292 discloses a thermal transfer recording medium comprising a coating of a heat-fusible substance and a high molecular weight cholesteric liquid crystal provided on a support. The cholesteric liquid crystal polymer is used in place of color pigment or dye for each color in an ordinary thermal transfer recording medium, so that a color image is obtained by changing the recording temperature.

JP '626 discloses a method of making an optical element comprising applying a cholesteric liquid crystal polymer solution onto a polyimide film, and heat treating to obtain oriented films, wherein the films are heat treated respectively at different temperatures so that the wavelengths for selective reflection are red, blue or green.

After applying an ultraviolet curing adhesive to the liquid crystal polymer layer, the films are laminated with a glass substrate and irradiated with ultraviolet light, then the substrate film is peeled to transfer the liquid crystal polymer layers to the glass substrate

Allowable Subject Matter

4. Claims 5-8 and 12-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John A. McPherson whose telephone number is (703) 308-2302. The examiner can normally be reached on Monday through Friday, 7:30 AM to 4:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Huff can be reached on (703) 308-2464. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9310 for regular communications and (703) 872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.
